The Importance of the Vault

THE ANATOMY OF A DORIC VAULT

1. Decorative carapace for added strength that features personalized nameplate & emblem.

2. Steel reinforced cover for added strength.

3. Inner liner of touch ABS Fiberlon®, Lustra-Tech® or Durapreme® bonded to minimum 5000 psi reinforced concrete base and cover

4. Doric's Integra-Seal® forms an extra barrier from moisture after the vault is sealed

5. Exterior of vault has a hand-applied water resistant coating

DORIC®

The Importance of the Vault

When the burial vault is set at the cemetery it often looks like this. At the conclusion of services the casket is placed in the vault; the vault is sealed above ground and carefully lowered into the grave.

Ultimate Vaults

Superior Quality Burial Vaults

OLYMPIAN®

The Doric Olympian® burial vaults are unmatched in the burial vault industry today. Designed for families who desire only the best for their loved one, the Olympians® are known for their handcrafted beauty, superior strength and durability. The Olympian® vaults offer a fourth layer of material to surround the casket. This outer casing of durable bronze or stainless steel forms an extra barrier against the elements occurring naturally in the ground. Each Doric Olympian® is formed from the high strength 5000 psi reinforced concrete, bonded to ribbed inner liner of fiber-enhanced Doric Fiberlon®. Bronze or stainless steel is then chemically bonded to the inner liner for additional stability. The entire unit is then encased in hand brushed and clear coated bronze or stainless steel. Backed by the DORIC full 100 year warranty.

The careful detail of the Doric Olympian® makes them a new standard in premium burial vaults. Each Olympian Bronze or Olympian Stainless Steel forms a lasting tribute to a life well lived. Matching metal nameplate and metal standard emblem, as well as vinyl personalization available.

Manufacturing

Superior Quality Burial Vaults

C&M Concrete is independently inspected by the National Concrete Burial Vault Association. These field inspections and their certification assure you of receiving a product that has been made to exacting standards. Below is a step-by-step look at how a burial vault is manufactured.

Doric vaults feature an exclusive ribbed inner lining formed to exacting standards at our manufacturing facility in Kerrville, TX.

Burial vault liner is prepared to receive its outer casing of concrete. A layer of Integra-Bond® assures proper lamination.

Integra-Seal® butyl sealing compound is laid into the seal groove on the cover of the vault.

Concrete is poured into the base form and vibrated to insure all air pockets have been removed. The process is repeated for the cover to complete the vault.

After the concrete begins to set, the forms are removed. The product is smoothed and stored for final curing and finishing.

Manufacturing

Superior Quality Burial Vaults

The vault begins the controlled 28-day process of curing to a load bearing strength of 5000 pounds per square foot. It will continue to cure after it is placed in the grave.

A water resistant exterior finish is applied to the outside of the vault. A hand applied highlighting completes many Doric vaults.

Personalized nameplate and emblem are applied and the vault is prepared for delivery to the cemetery on the day of the funeral.

Manufacturing

Superior Quality Burial Vaults

Construction Components

Plastic Inner Liners

DORIC FIBERLON® plastic is formed with strengthening ribs for use as a lining in the DORIC PHOENIX®. It is a super high impact enhanced plastic. It evidences great impact and compressive strength. Consumers find applications of plastics such as FIBERLON® in NFL football helmets, telephone set casings and snowmobile or Wave runner components. The bronze, copper and stainless steel inner liners of the DORIC BRONZE®, LYDIAN® and ATHENIAN® are chemically bonded to FIBERLON® for additional strength.

LUSTRA-TECH® used on the DORIC PATRICIAN® is a high-gloss, high impact plastic formulated to enhance impact and tensile strength. LUSTRA-TECH® gives the PATRICIAN® a classic look of marble. Plastic similar to LUSTRA-TECH® are used in luggage and construction.

DURAPREME@ is used to form the linings of the DORIC TIARA® and TITAN®. It is a tough high impact plastic. When formed into a lining with strengthening ribs on all sides, it exhibits tough flexural strength. Plastics like DURAPREME® are found in consumer items such as tableware and appliance linings.

DORIC Ribbed Liners

DORIC plastic liners used on the PATRICIAN®, PHOENIX®, TIARA® and TITAN® have strengthening ribs in their design, increasing both impact and compressive strength.

Integra-Bond™ All DORIC burial vaults use a special bonding system. This adhesive bonds the plastic inner liner to the concrete wall and cover.

Integra-Seal™ All DORIC burial vaults use a butyl compound in their seal groove that merges base and cover to form a single sealed unit. This butyl compound is highly resistant to extreme fluctuations in temperature.
